Here is the email exchange between Gabrielle Settles and I regarding her queries. See her email to me at the bottom then read mine which follows below. Here is the article she wrote:

<https://www.politifact.com/factchecks/2021/aug/25/facebook-posts/evidence-shows-covid-19-variants-are-largely-sprea/>

Subject: Re: PolitiFact Article Inquiry - claim on vaccinated people spreading COVID-19 variants

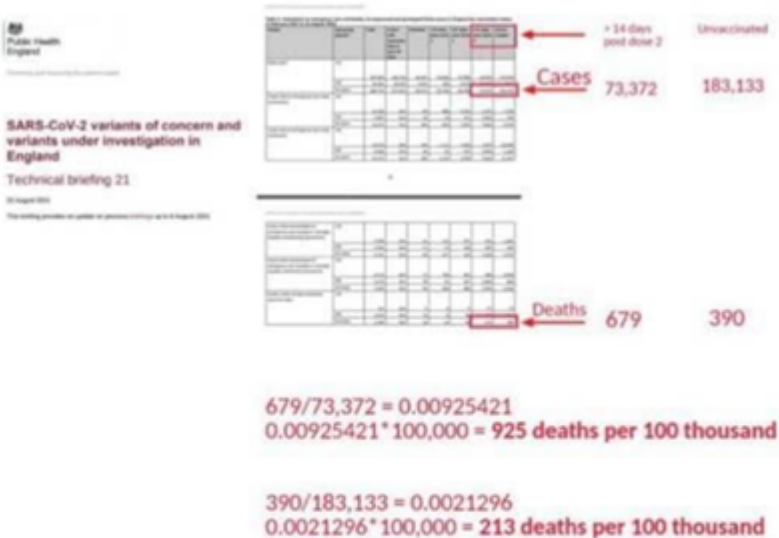

Hi Gabrielle.

How are you? Thank you for reaching out to me. Wow we have some different information informing our opinions. That's okay there is a lot of that going around. I'm on a flight back to Houston from Seattle so I have some time. The variants are arising from "imperfect vaccination" or "immune escape". This is very common with "leaky" vaccines. Lots of lit on this in pub med and just a Google search. The variants first arose in the countries where the various gene therapy vaccines were originally trialed in clinical trials. I've never heard they were isolated from the non jabbed but this is possible. I certainly don't think they originated from the non-jabbed. The pressure to drive variants is not the same in the unvaxxed. A good illustration of the evolution is seen in the figure below.

There are others such as Dr. Geert VandenBosche and Dr. Perrone who will tell you the same... few others now too have realized this is true. We are seeing two things in the vaxxed. 1) We are seeing front line killer T cell depletion/ modulation. I believe this is due to an immunosuppressive peptide which shares homology with Syncytin 2 on spike protein and confers immune tolerance during pregnancy. This lowers the ability of the vaxxed to fight off contracting the virus. This may be a form of antibody dependent enhancement (ADE) as well that we saw in all animal studies prior to the trials. We have begun to question the real results of the animal trials in primates now especially the time frames of the investigations following challenges and the history of Pharma faking data on trials. We are seeing the contraction and spread of the virus more easily in this population. We are also seeing the vaxxed succumb to other respiratory illness and infection. In the UK there is a 434% increase in Covid deaths in the fully vaxxed as compared to unvaxxed overall.

Forwarded Message From: The Western Chauvinist

New health data released by Public Health England show that the double vaxxed are dying at a rate 434% higher than the unvaccinated. This is huge news and also quite sad.

2) we are seeing the evolution of mutant strains of the virus in the vaxxed because they can contract the virus and because they can spread the mutated virus which replicates to avoid the antibodies they have produced just to small region of the spike protein rather than the whole virus (immune escape) with few initial symptoms. We also know now that the vaxxed carry as much as 250 times the nasal viral load as the unvaxxed. I and others believe this is driving the pandemic. The unvaxxed with intact immunity are for the most part immune or cross/immune as was found early on by Peter Doshi others.

This all seems really alarming until you realize that we have safe and effective treatments in HCQ and Ivermectin. I am truly serious when I say we can stop all this quickly and cheaply by implementing these safe and effective drugs in both prophylaxis and treatment. I guess that's why the doctors and scientists that know this and have treated patients successfully with these drugs and others, are so frustrated. We literally see lives being lost for love of money and power and treatments that work being demonized for the benefit of Pharma and political control measures. It's heartbreaking.

Here is the data on HCQ use back in June of 2020.

This data was from a suit filed against the FDA in June of 2020. <https://www.courtlistener.com/docket/17221869/association-of-american-physicians-surgeons-v-food-drug-administration/>

Here is another oldie but goodie

Index New dead / New Cases Resolved (nrCFR)* - France and Switzerland

Comments :

- Over the period, the difference between countries can easily be observed
- The french index is constantly higher except when Switzerland suspended the dispensing of hydroxychloroquine

— France
— Suisse

Source : Johns Hopkins U. data https://github.com/CSSEGISandData/COVID-19/tree/master/csse_covid_19_data
*index nrCFR : new dead divided by new cases resolved over the period, 7 day moving average.

Gabrielle. I'm sick with grief over the lies and the cost of those lies. We all must take a stand and tell the truth or I fear we won't recognize the future ahead of us.

I know that because of the work you do, that you know there is more going on than a virus with a 99 percent survival rate on par with the seasonal flu or in that range. This is just the means to an end. My goal is to save lives from these extremely dangerous gene therapies and to try to allow people to have informed consent to some degree. We can and have saved lives with HCQ and ivermectin. We are killing children with these vaccines.. literally. There is no epidemic of children in the hospitals.. this is a story to drive the vaccines into the younger population through fear. This is the recent CDC data on cases and hospitalization rates of children with Covid.

Posted on 7:23 AM · Aug 22nd, 2021

Every story that demonizes safe and effective treatments over incentivizing these experimental gene therapies... pushes us closer to the brink of losing medical autonomy and choice over what goes in ours and our children's bodies... over what rights we have as sovereign free citizens.

Please read what I have provided and add to that research. SEE what is happening in S. Africa and Australia and know it will be here before you know it if we don't take a stand, now.

God bless you in your efforts. I hope his hand guides yours as you consider what I have said.

Kindest regards.

Janci

Hi Dr. Lindsay,

My name is Gabrielle Settles, and I'm a reporter for PolitiFact, where we fact check and report on social media claims regarding COVID-19.

I'm currently fact checking your Facebook post which states that it is the vaccinated and not the unvaccinated who are spreading the COVID-19 mutant variants, and read your comparison of the vaccines to the Marek's disease in chickens. Your post also stated that hydroxychloroquine and ivermectin should be used as treatments instead of the vaccines. I've talked to health experts who point to evidence that the first detections of COVID-19 variants were found in unvaccinated people, not vaccinated, and that the comparison of the vaccine to the Marek's disease isn't correct, as there is no clear data on how much transmission comes from vaccinated people. I've also referenced reports that hydroxychloroquine and ivermectin have not been approved by the FDA because they're not effective treatments for COVID due to the risks they pose.

I wondered if there was something I am missing, and wanted to ask if you have any evidence and comments you can provide for this article that would back up your claim.

Thanks for your time,

--
